) The app is a free download. It also at launch supports more than 20 languages for dictation, and can translate in real-time into 60 languages.. You can also choose to insert your punctuation manually, or allow the software to do it automatically as you speak.. Once the add-in is installed, a new menu appears in the productivity app's toolbar, allowing you to click to begin your dictation.

But with the release of Mountain Lion, Apple has for the first time built text dictation into the operating system.. This is perhaps its most clever trick, as that means you can speak in your language, while Dictate types it out in another.. The add-in to some extent competes with other solutions, like Nuance's for dictation in Office 365 or Office 365 Online, for example, or even built-in OS-level support for dictation, which is already a feature found in both the and operating systems.. For a long time if you wanted or needed to use a speech-to-text dictation program on your Mac, your only choices were MacSpeech Dictate (now defunct) and Nuance's DragonDictate.
